PGRCINOX15 / PGRCINOX22	PERGO Stainless steel radiator cover		125x140x19 mm	1 blister = 2 pc

**Product description**

Wood is the main component of your Pergo® floor. Since humidity levels can vary – for example between summer and winter – the floor must be able to breathe and so should be allowed to expand and contract along all the sides. To allow this, an 8 to 10 mm expansion joint is to be foreseen around the floor.

The Pergo® radiator pipe covers will allow you to finish off the joints around heating elements and pipes in a sleek and stylish way. Available in 15 mm or 22 mm diameter.

**Features**

- stainless steel, 2 mm thickness.
- 1 “click”-side: perfectly clicks together, no separate gluing required
- You can turn the joints towards the back side of the pipe: seamless look!

**Product specifications**
